Please describe the objectives of a veterinarian meeting this shortage situation as well as being located in the community, area, state/insular area, or position requested above (limit your response to 200 words or less).

This nomination would allow for increased food animal veterinary support to an individual interested in locating to an underserved, mountainous area of far western North Carolina. While total animal numbers are not large in any of these counties except Haywood (15,400), the counties are populated by numerous small cow/calf operations and are central to a vibrant western N. C. beef cattle industry, as well as the main source of income for many family farmers. The remoteness and mountainous nature of the area make service by veterinarians in surrounding counties problematic, if not impossible. In addition to cattle, the area does have a vibrant sheep, goat, and camelid population. Haywood County ranks 6th in the state in milk cows, and 13th in total cattle.

Please describe the activities of a veterinarian meeting this shortage situation and being located in the community, area, state/insular area, or position requested above (limit your response to 200 words or less).

This nomination would support an individual willing to locate within the area and provide mixed animal veterinary services to a rural area. The individual could establish a new practice in any of the five counties, or become employed by any of the existing practices with currently minimal presence- Haywood (1 food animal veterinarian), Swain (1), Jackson (1), or Macon (1). Transylvania country currently has none. The individual could provide comprehensive services for all species, with at least 30% dedicated to food animal. As in most underserved areas, the ability to financially support a 100% food animal practice would be difficult, thus the Type II nomination. The activities of a dedicated mixed animal practitioner in this area would greatly assist the preservation and expansion of a vibrant and varied food animal industry in a relatively remote area of North Carolina.

Please describe any past efforts to recruit and retain a veterinarian in the shortage situation identified above (limit your response to 100 words or less).

Direct information on specific efforts to recruit to this area is not extensive. The intent of this nomination is focused primarily on providing the opportunity for a young, recently graduated veterinarian to locate to the area and establish himself/herself within a small community as a professional resource and contributor to the agricultural and social infrastructure of the area.

Please describe the risk of this veterinarian position not being secured or retained. Include the risk(s) to the production of a safe and wholesome food supply and to animal, human, and environmental health not only in the community but in the region, state/insular area, nation, and/or international community (limit your response to 250 words or less).

As with many of these underserved areas, the risk of lack of food animal veterinarians will have negative impact on our state and nation's animal disease, food supply, and public health preparedness. This four county area is no different than hundreds throughout the country. Dedicated food animal veterinarian availability is critical to foreign and endemic animal disease surveillance. It is well documented that food supply veterinarians serve a key role in public health preparedness, as 75% of emerging human diseases are of animal origin. Veterinarians often serve on small community local public health boards and commissions. The lack of food supply veterinarian availability directly impacts animal welfare, as many producers are reduced to practicing on their own animals beyond the scope of their ability, often with inhumane results and subsequent environmental impact through improper disposal of deceased livestock. The use of antimicrobials without veterinary oversight increases the rate of residue violations in the food supply. The failure of this position not being secured, as with many of North Carolina's nominations, will continue the erosion of critical food supply veterinary infrastructure within our state.

Please indicate whether you consider this situation/position a candidate for a "service in emergency" agreement (limit your response to 100 words or less). Please see solicitations for additional information regarding the obligation of participants who enter into the "Service in Emergency" agreement.

Authorized State or Insular Area Animal Health Official or designee:

Name: Dr. David T. Marshall

Title: State Veterinarian

Organization: NC Dept. of Agriculture and Consumer Services
